

AP[®] Psychology: Syllabus 1

Syllabus 1058792v1

Scoring Components	Page(s)
SC1 The course provides instruction in history and approaches.	3
SC2 The course provides instruction in research methods used in psychological science, practice and ethics.	3
SC3 The course provides instruction in biological bases of behavior.	3
SC4 The course provides instruction in sensation.	3
SC5 The course provides instruction in perception.	3
SC6 The course provides instruction in states of consciousness.	4
SC7 The course provides instruction in learning.	5
SC8 The course provides instruction in cognition.	4
SC9 The course provides instruction in motivation.	4
SC10 The course provides instruction in emotion.	4
SC11 The course provides instruction in developmental psychology.	4
SC12 The course provides instruction in personality.	4
SC13 The course provides instruction in testing and individual differences.	4
SC14 The course provides instruction in abnormal psychology.	5
SC15 The course provides instruction in treatment of psychological disorders and ethics used in psychological practice.	5
SC16 The course provides instruction in social psychology.	5
SC17 As relevant to each content area, the course provides instruction in empirically supported psychological facts, research findings, terminology, and associated phenomena, perspectives, and major figures.	5, 7

Courses are scheduled in a rotating eight-block schedule. Each class meets for a 58-minute block on six out of every eight school days. In a 182-day school year, allowing eight days for semester exams, classes meet approximately 66 days each semester and 132 days each year. Approximately 12 to 15 of those days occur in late May and June, after the administration of the AP[®] Exam.

Course Objectives

The central question addressed in AP Psychology is “How do psychologists think?” The psychologist David Myers wrote that to think as a psychologist, one must learn to “restrain intuition with critical thinking, judgmentalism with compassion, and illusion with understanding” (Sternberg 1997). Whether students choose to pursue a career related to psychology or one in some entirely different field, this habit of mind will be of great value.

The AP Psychology course is designed to introduce students to the systematic and scientific study of the behavior and mental processes of human beings.

- Students learn about some of the explorations and discoveries made by psychologists over the past century.
- Students assess some of the differing approaches adopted by psychologists, including the biological, behavioral, cognitive, humanistic, psychodynamic, and sociocultural perspectives.
- Most important, students come to an appreciation of how psychologists think (or at least an appreciation of the kind of critical analysis that psychologists espouse and hope to model in their words and actions).

Resources for Teaching AP Psychology

1. Text: Myers, David G., *Psychology*, 10th ed. New York: Worth Publishers, 2011. With Psychportal, PsychSim, and Instructor’s Resource Manual, including online Faculty Lounge.
2. Membership in APA and especially in Teachers of Psychology in Secondary Schools (TOPSS). The quality of support provided for high school teachers is outstanding. From journals and news releases to sample unit plans, this is something a new teacher of psychology should make a priority.
3. 2007 and 2004 AP Released Exam in Psychology (1999 Released Exam is located on the course home page on AP Central); other support materials.

Supplemental and Summer Reading

Numerous short articles and readings drawn from books, newspapers, magazines, and journals are assigned. During the summer, students are required to read one work of psychology of their own choosing from an approved list, to maintain a journal in dialectical form as they read, and to write a critical review upon completion of their reading.

Grading Policy

The course grade is a weighted average consisting of the following elements:

Quarterly grades	20% (each)
Final exam grade	20%

The course grade is a weighted average consisting of the following elements:

Preparation (daily assignments and quizzes)	20%
Participation (attendance and class discussion)	20%
Evaluation (tests, essays, journals, projects, research paper, and oral presentations)	60%

Course Outline

I. Scope, History, and Methodology [SC1 & SC2]

- Historical Schools: Functionalism vs. Structuralism
- Modern Approaches: Psychodynamic, Behaviorist, Cognitive, Humanistic, Evolutionary, Neuroscience
- Nature of Scientific Inquiry: Sources of bias and error
- Research Methods: Introspection, observation, survey, psychological testing, controlled experiments
- Statistics: Central tendency, variance, significance, correlation
- Ethics in Research: Human participants, animal subjects

SC1—The course provides instruction in history and approaches.

SC2—The course provides instruction in research methods used in psychological science, practice and ethics.

II. Behaviorism

- Historical Background and Philosophy of Radical Behaviorism
- Classical Conditioning: Pavlov, Watson, applications, biological critique, cognitivist challenge
- Operant Conditioning: Thorndike, Skinner, Bandura, behavior modification, biological critique, cognitivist challenge

III. Neuroscience [SC3]

- Neuron: Neuronal and synaptic transmission, psychopharmacology, drug abuse
- Brain: Research methodology, neuroanatomy, brain development and aging, hemispheric specialization
- Nervous System: Structural and functional organization
- Endocrine System: Anatomy, HPA-axis, and immune system
- Genetics and Heritability

SC3—The course provides instruction in biological bases of behavior.

SC4—The course provides instruction in sensation.

IV. Sensation and Perception [SC4 & SC5]

- Psychophysics: Thresholds (absolute, difference, Weber’s constants), signal detection theory

SC5—The course provides instruction in perception.

- Sensory Organs and Transduction: Visual (including color vision and feature detection), auditory, olfactory, gustatory, proprioceptive (including kinesthetic and vestibular)
- Perception: Attention, processing, illusions (including Gestalt psychology), camouflage

V. Developmental Psychology [SC11]

- Methodology: Longitudinal and cross-sectional studies
- Nature vs. Nurture (maturation versus learning)
- Influential Theories: Piaget and cognitive development, Freud and psychosocial development, Kohlberg and moral development, Gilligan and gender differentiation
- Infancy, Childhood, Adolescence, and Adulthood

SC11—The course provides instruction in developmental psychology.

SC13—The course provides instruction in testing and individual differences.

SC6—The course provides instruction in states of consciousness.

SC8—The course provides instruction in cognition.

SC9—The course provides instruction in motivation.

SC10—The course provides instruction in emotion.

SC12—The course provides instruction in personality.

VI. Intelligence and Psychological Testing [SC13]

- Psychological Testing: Methodology, norms, reliability, validity
- Intelligence: Defining intelligence, history of intelligence and aptitude testing, nature-nurture issues

VII. Consciousness, Memory, and Language [SC6]

- States of Consciousness: Waking, sleep and dreaming, hypnosis, altered states
- Memory: Information processing, storage, retrieval
- Accuracy of Memory: Loftus and Schacter
- Cognition: Problem solving and heuristics [SC8]
- Language: Skinner and Chomsky

VIII. Motivation and Emotions [SC9 & SC10]

- Motivational Concepts: Instincts, drives, optimal arousal, Maslow’s hierarchy
- Hunger and Eating Disorders
- Sexuality and Sexual Orientation
- Achievement Motivation: McClelland and the TAT, intrinsic versus extrinsic motivators
- Physiology of Emotion: Fear, anger, happiness
- Expression of Emotion: Darwin and Ekman
- Theories of Emotion: James-Lange, Cannon-Bard, Schacter-Singer

IX. Personality [SC12]

- Psychodynamic Perspective: Freud, Jung, Adler
- Trait Perspective: Allport, factor analysis and the five-factor model, assessment (Myers-Briggs, MMPI)
- Humanistic Perspective: Maslow and Rogers
- Social-Cognitive Perspective: Bandura and Seligman

X. Stress and Health

- Stress as a Concept: Selye
- Stress and Health
- Adjustment

XI. Abnormal Psychology [SC14]

- Approaches to Abnormality: The Rosenhan study, historical approaches (deviance), the medical model, the biopsychosocial model [SC17]
- Classifying Disorders: Evolution of the latest Diagnostic and Statistical Manual (DSM)
- Major Categories of Disorders: Anxiety disorders, dissociative disorders, mood disorders, schizophrenia, personality disorders
- Major Approaches to Psychotherapy: Psychoanalysis, behavioristic, humanistic, cognitive, group, pharmacological [SC15]
- Does Therapy Work? Eysenck, outcome studies, the *Consumer Reports* study

SC14—The course provides instruction in abnormal psychology.

SC17—As relevant to each content area, the course provides instruction in empirically supported psychological facts, research findings, terminology, and associated phenomena, perspectives, and major figures.

SC15—The course provides instruction in treatment of psychological disorders and ethics used in psychological practice.

XII. Social Psychology [SC16]

- Attitudes and Behavior: Fundamental attribution error, roles, Festinger and cognitive dissonance
- Group Influence: Asch and conformity, Milgram and obedience, facilitation and loafing, Janis and groupthink
- Prejudice and Scapegoating
- Altruism: Darley and Latané

SC16—The course provides instruction in social psychology.

XIII. Learning [SC7]

- Classical conditioning
- Operant conditioning
- Social learning

SC7—The course provides instruction in learning.

Assessment Practices

Traditional Assessments

Unit Tests

These tests are modeled on the AP Exam, with 50 multiple-choice questions and one essay to be completed in 58 minutes.

Quizzes

These are randomly scheduled at least once each unit and use the multiple-choice format.

Midterm Exam

Students take a midterm exam covering the first six units. The exam is in the same format as the AP Exam (multiple choice and short essays), but the number of multiple-choice questions is reduced proportionately to the time available in the exam period to maintain a similar time pressure.

Alternative Assessments**Summer Reading and Journal**

Students read one book from an approved list. As they read, they write reflective responses to passages of their choice in a double-entry journal. They write a critical review upon completion of the book. The journal and review are due on the first day of classes.

Unit Journals

Students continue writing in their double-entry journals approximately twice each week throughout the course. These journals facilitate deep processing of learning and differentiation of instruction by encouraging critical thinking and independent exploration. They also provide an additional forum for the teacher to give feedback to guide individual students. Entries must be linked to the unit that is being studied and contain the following elements:

- student reflection on readings
- class discussions and activities
- personal experiences
- recent news or television broadcasts
- Internet research

Projects**Naturalistic Observation**

Each student completes a 15-minute observation of a human participant in a naturalistic setting. The purpose is to familiarize students with this method, to improve their powers of observation, and to help them distinguish between subjective and objective records.

Experimental Design

Students are given a hypothetical research problem and told to write a proposal for a controlled experiment to solve it. The exercise serves to improve their understanding of research methodology.

Behavior Modification

Each student designs an application of operant conditioning principles to modify a human participant's behavior. After receiving IRB (institutional review board) approval, students attempt the modification over a three-week period. The project develops firsthand experience of Skinner's theory.

Applications of Developmental Psychology [SC17]

Students work in small groups to research a recent topic related to the unit on development (e.g., the benefits of Head Start programs, effectiveness of sex or drug education programs, effects of divorce on children) and then present their findings to the class in an oral report of 15 to 20 minutes. The project provides an introduction to library and online research tools in psychology as well as APA documentation.

SC17—As relevant to each content area, the course provides instruction in empirically supported psychological facts, research findings, terminology, and associated phenomena, perspectives, and major figures.

Controlled Experiment

Students research a topic of their choice, subject to IRB approval. The final project must incorporate a review of literature, discussion of method, presentation and evaluation of results, and a conclusion.

Review of Literature

Students research a topic of their choice. The final paper must develop an original thesis on a controversial topic.

Poster Presentation (Final Exam)

In lieu of a traditional final exam, students present the results of their second-semester project to the class. The presentation is in poster form, accompanied by a 30-minute lecture (including a question-and-answer time).

Extra Credit**Psychology Book Review**

Students wanting to do additional work for extra credit are directed to read one of the books from the summer reading list, or another title that is satisfactory to the teacher, and complete a critical review. The book must relate to the unit under study at that time.
